

CS3354 Assignment 1

Git Commands:

I have made a separate repository specifically for this class so that I can upload all of my coding assignments. In order to push these code bits to my Repo I used these commands in this order

```
git add "myCode.java"
```

```
git commit -m "some message showing a commit"
```

```
git push -u origin main
```

I have not made a separate branch for my repo because as of right now I do not need one.

The screenshot shows a GitHub repository interface for a user named zachlmccall131. The repository is named "CS3354fall2026" and is public. It has 1 branch (main) and 0 tags. The commit history shows a recent commit by zachlmccall131 with the message "committing the rest of these exercises" at hash bb6f41a, made 1 minute ago. This commit includes 2 files: Hello.java and checkTemp.class, both committed 1 minute ago. Previous commits from 3 days ago include ticketCounter.class, ticketCounter.java, triangleProblem.class, and triangleProblem.java, all committed by zachlmccall131.

File	Commit Message	Time
Hello.java	committing the rest of these exercises	1 minute ago
checkTemp.class	committing the rest of these exercises	1 minute ago
checkTemp.java	committing the rest of these exercises	1 minute ago
ticketCounter.class	ticketCounter commit	3 days ago
ticketCounter.java	ticketCounter commit	3 days ago
triangleProblem.class	committing the rest of these exercises	1 minute ago
triangleProblem.java	committing the rest of these exercises	1 minute ago

Solving the code:

J ticketCounter.java M X J triangleProblem.java X J checkTemp.java X

J ticketCounter.java > ticketCounter

```
1  import java.util.Scanner;
2
3  public class ticketCounter {
4
5
6
7      Run | Debug
8      public static void main(String[] args) {
9          int ticketsSold = 0;
10         double ticketPrice = 15.00;
11         double totalRevenue = 0.00;
12
13         // Simulate selling tickets
14         Scanner keyboard = new Scanner(System.in);
15         System.out.print(s: "Enter the number of tickets sold: ");
16         ticketsSold = keyboard.nextInt();
17         totalRevenue = ticketsSold * ticketPrice;
18
19         System.out.println("Tickets Sold: " + ticketsSold);
20         System.out.println("Total Revenue: $" + totalRevenue);
21         keyboard.close();
22     }
23 }
```

Problems Output Debug Console Terminal Ports

```
~/Documents/school_work/fall_2026/oop | main !1 11:30:05 PM
> /usr/bin/env /Library/Java/JavaVirtualMachines/amazon-corretto-11.jdk/Contents/Home/bin/
java -cp /Users/zachmccall/Library/Application\ Support/Code/User/workspaceStorage/1c564f65
b9e440b2620064064b4f918e/redhat.java/jdt_ws/oop_9c6c70a4/bin ticketCounter
Enter the number of tickets sold: 17
Tickets Sold: 17
Total Revenue: $255.0

~/Documents/school_work/fall_2026/oop | main !1 4s | 11:30:09 PM
> |
```

```
J ticketCounter.java M × J triangleProblem.java × J checkTemp.java ×
J checkTemp.java > checkTemp > main(String[])
1 import java.util.Scanner;
2
3 public class checkTemp {
4     Run | Debug
5     public static void main(String[] args) {
6         Scanner scanner = new Scanner(System.in);
7         System.out.print(s: "Enter temperature in Fahrenheit: ");
8         double temperatureFahrenheit = scanner.nextDouble();
9
10        if (temperatureFahrenheit <= 32) {
11            System.out.println(x: "It's freezing!");
12        } else if (temperatureFahrenheit > 32 && temperatureFahrenheit <= 50) {
13            System.out.println(x: "It's cold.");
14        } else if (temperatureFahrenheit >= 50 && temperatureFahrenheit <= 70) {
15            System.out.println(x: "It's cool.");
16        } else if (temperatureFahrenheit >= 85 && temperatureFahrenheit <= 90) {
17            System.out.println(x: "It's warm.");
18        } else {
19            System.out.println(x: "It's hot!");
20        }
21        scanner.close();
22    }
23 }
```

Problems Output Debug Console Terminal Ports

```
