

CS 3354 Week 2 Assignment

The original code I made was functional. 3 changes I added to my code were: Adding returns in the correct spaces, changing the name of the actual program to fit the style guide, and editing the variable and methods to the correct casing.

The JavaDoc section was annoying for me because in my VSCode, the lettering becomes different colors and all in the wrong places whenever I put in JavaDoc comments. Regardless I do find it useful to have the functions parameters and their return values. It helps quite a lot when creating the logic of the code and the overall legibility of the code.

Here is the link to my repository. I will be updating it throughout the semester whenever we have projects or exercises.
